Allowance of Application # 09/675,256

1. The following communication is in response to applicant's Amendment A, received on 17-May-2004.

Reasons for Allowance

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the invention described in the article authored by Allen et al., entitled *Application of Virtual Reality Devices to the Quantitative Assessment of Manual Assembly Forces in a Factory Environment*. The improvement comprises an apparatus and method for conducting an ergonomic analysis of a physical activity performed by a user, wherein a user's initial body position is captured and the changes in the initial position are measured as the user performs a physical activity, whereby a level of physical exertion necessary to perform the change is determined and displayed, wherein performance of the physical activity is simulated over time and used to create an ergonomic analysis of the physical activity. This patentable distinction is included in each of the independent claims, nos. 1, 4, 10, 11 and 15. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <ergonomic analysis of a physical activity performed by a user> having the corresponding structure which is disclosed in the specification and equivalents. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
